The processes that have this common theme, controlled material removal, are today collectively known as subtractive manufacturing, in distinction from processes of controlled material addition, which are known as additive manufacturing. Thu, 10 Jan 2019 04:57:00 GMT Machining - Wikipedia - Air carbon arc cutting previously known as air arc cutting, is an arc cutting process where metal is cut and melted by the heat of a carbon arc. Molten metal is then removed by a blast of

air. It employs a consumable carbon or graphite electrode to melt the material, which is then blown away by an air jet.
