Thu, 07 Feb 2019 11:48:00 GMT ClassZone - An empty Bloom filter is a bit array of m bits, all set to 0. There must also be k different hash functions defined, each of which maps or hashes some set element to one of the m array positions, generating a uniform random distribution. Typically, k is a constant, much smaller than m , which is proportional to the number of elements to be added; the precise choice of k and the constant of ...
